Hope you can avoid what I ran in to. Two things: "Anti-Virus" & "USB Drive".
Takes a huge amount of time. It's not my system. So, I had to muddle thru.
But I did install Vidado WebPACK 2018/3 successfully. Lot of screenshots.

Love,
Dad
(Your Father)

Project name:

Project location: ...

☒ Create project subdirectory

Project will be created at: E:\...example-samples\bb_dirs\b_acedemia\HowardULAB\pga4fun\project_1

New Project

Project Type
Specify the type of project to create.

☒ **RTL Project**
You will be able to add sources, create block designs in IP Integrator, generate IP, run RTL analysis, synthesis, implementation, design planning and analysis.
☐ Do not specify sources at this time

☐ **Post-synthesis Project** You will be able to add sources, view device resources, run design analysis, planning and implementation.
☐ Do not specify sources at this time

☐ **I/O Planning Project**
Do not specify design sources. You will be able to view part/package resources.

☐ **Imported Project**
Create a Vivado project from a Synplify, XST or ISE Project File.

☐ **Example Project**
Create a new Vivado project from a predefined template.

ust click through. Don 't add anything for "Add Sources".

New Project

Default Part
Choose a default Xilinx part or board for your project.

Subject: ChixLabAss1.pdf

Hi Hannah,

Prerequisite for Project 1 is quite interesting to say the least. Prep for all this must be made familiar to you as much as it is to me. I haven't been drilling you on it, but the SSH subject matter has to be addressed. I've done my deep thought and realize it's a side subject.
